

Problem

Given the names and grades for each student in a class of N students, store them in a nested list and print the name(s) of any student(s) having the second lowest grade.

Note: If there are multiple students with the second lowest grade, order their names alphabetically and print each name on a new line.

Example

`records = [{"chi", 20.0}, {"beta", 50.0}, {"alpha", 50.0}]`

Submissions

The ordered list of scores is `[20.0, 50.0]`, so the second lowest score is `50.0`. There are two students with that score: `["beta", "alpha"]`.
Ordered alphabetically, the names are printed as:

alpha
beta

Leaderboard

Input Format

The first line contains an integer, N , the number of students.
The $2N$ subsequent lines describe each student over 2 lines.
- The first line contains a student's name.
- The second line contains their grade.

Discussions

Constraints

- $2 \leq N \leq 5$
- There will always be one or more students having the second lowest grade.

Output Format

Print the name(s) of any student(s) having the second lowest grade in. If there are multiple students, order their names alphabetically and print each one on a new line.

Editorial

Sample Input 0

5
Harry
37.21
Berry
37.21
Tina
37.2
Akriti
41
Harsh
39

Tutorial

Sample Output 0

Berry
Harry

Explanation 0

There are **5** students in this class whose names and grades are assembled to build the following list:

```
python students = [['Harry', 37.21], ['Berry', 37.21], ['Tina', 37.2], ['Akriti', 41], ['Harsh', 39]]
```

The lowest grade of **37.2** belongs to Tina. The second lowest grade of **37.21** belongs to both Harry and Berry, so we order their names

Change Theme Language Pypy 3

```
1 if __name__ == '__main__':
2     alist = []
3     for i in range(int(input())):
4         name = input()
5         score = float(input())
6         alist.append([name, score])
7     second_highest = sorted(set([score for name, score in alist]))
8     print('\n'.join(sorted([name for name, score in alist if score == second_highest])))
```
